

The figure displays a 20x20 grid of colored circles, where each circle's color represents a value from a scale ranging from red (low) to yellow (high). The highest values, represented by yellow, are concentrated in the top-left corner, specifically in the second row, eighth column. The values generally decrease towards the bottom-right corner, where the circles are predominantly red. The color scale is indicated by a vertical bar on the left side of the grid, showing a gradient from red at the bottom to yellow at the top.
